

Ideation Phase

Define the Problem Statements

Date	22 June 2026
Name	M Manosika
Project Name	Automated Network Request Management System
Maximum Marks	2 Marks

PS-1: End-User Perspective (The Requester)

- **User Role:** Employee requesting a new network connection or relocation of existing network hardware.
- **Objective:** Submit complete network and location details to the IT Infrastructure team for quick service provisioning.
- **Current Challenge:** The existing request process depends on manual forms and repeated email communication, making it difficult to submit accurate information in one attempt.
- **Root Cause:** Lack of automated field validation and dynamic form behavior results in incomplete or incorrect request submissions.
- **Impact:** Delayed request processing, repeated follow-ups, and an inefficient user experience.

PS-2: Backend Administrator Perspective (The Fulfiller)

- **User Role:** IT Network Infrastructure Administrator responsible for network provisioning and approval management.
- **Objective:** Maintain accurate network asset records and process requests efficiently.
- **Current Challenge:** Requests often arrive with missing information, requiring manual verification, approval follow-ups, and spreadsheet updates.
- **Root Cause:** No centralized system for mandatory data validation, automated approval routing, or database updates.
- **Impact:** Increased manual workload, higher risk of human errors, and delays in completing network requests.
