

Ideation Phase

Empathize & Discover (Empathy Map Canvas)

Date	22 June 2026
Name	M Manosika
Project Name	Automated Network Request Management System
Maximum Marks	4 Marks

User Profile Persona

Enterprise Employee / Corporate Requester who requires a new network connection, additional network resources, or relocation of existing network equipment within the organization.

User Expectations

- Expects an easy-to-use self-service portal for submitting network requests without relying on lengthy email communication.
- Prefers the system to automatically populate personal details such as employee name, phone number, and email address.
- Wants clear visibility into request ownership, approval status, and overall progress.
- Requires confidence that the submitted network location details are accurately captured before implementation.

User Actions

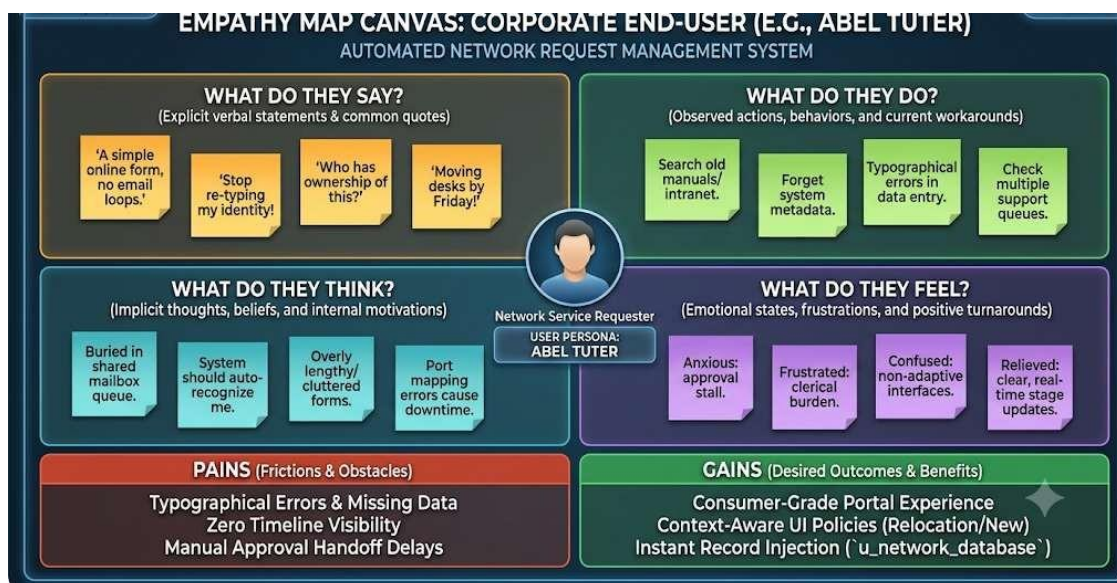

- Searches the organization's intranet or support documentation to understand the correct request submission process.
- Occasionally submits requests with incomplete device or network-related information.
- Manually enters room locations and equipment details, increasing the possibility of data entry mistakes.
- Regularly contacts the IT support team or checks support tickets to track the progress of submitted requests.

User Thoughts

- Hopes the request is reviewed promptly without getting delayed in the support queue.
- Believes the portal should automatically identify logged-in user information and minimize manual data entry.
- Expects the request form to display only the fields relevant to the selected request type.
- Understands that inaccurate network configuration could interrupt business operations during office relocation.

User Experience

- **Concerned:** Approval delays may postpone network setup and affect work schedules.
- **Frustrated:** Re-entering the same personal information for every request is repetitive and time-consuming.
- **Confused:** Lengthy forms with unnecessary fields make the submission process difficult.
- **Satisfied:** An automated Service Portal with real-time status updates improves confidence and overall user experience.

Summary of User Challenges and Expected Benefits

Challenges

- Complex and static request forms increase the chances of incomplete or incorrect submissions.
- Limited visibility into request status after submission.
- Manual approval workflows result in longer processing times.

Expected Benefits

- A centralized and user-friendly ServiceNow Service Portal for network requests.
- Dynamic UI Policies that display relevant fields based on the selected request type.
- Automatic transfer of approved request data to the network tracking table (**u_network_database**) through an automated workflow, improving data accuracy and request tracking.
