

Project Design Phase-II

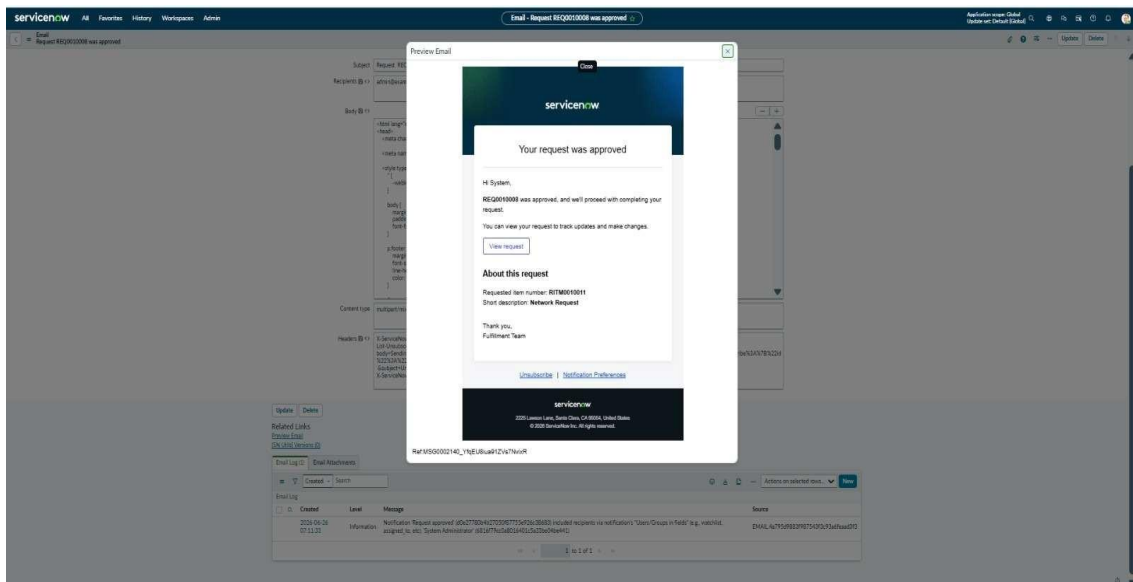

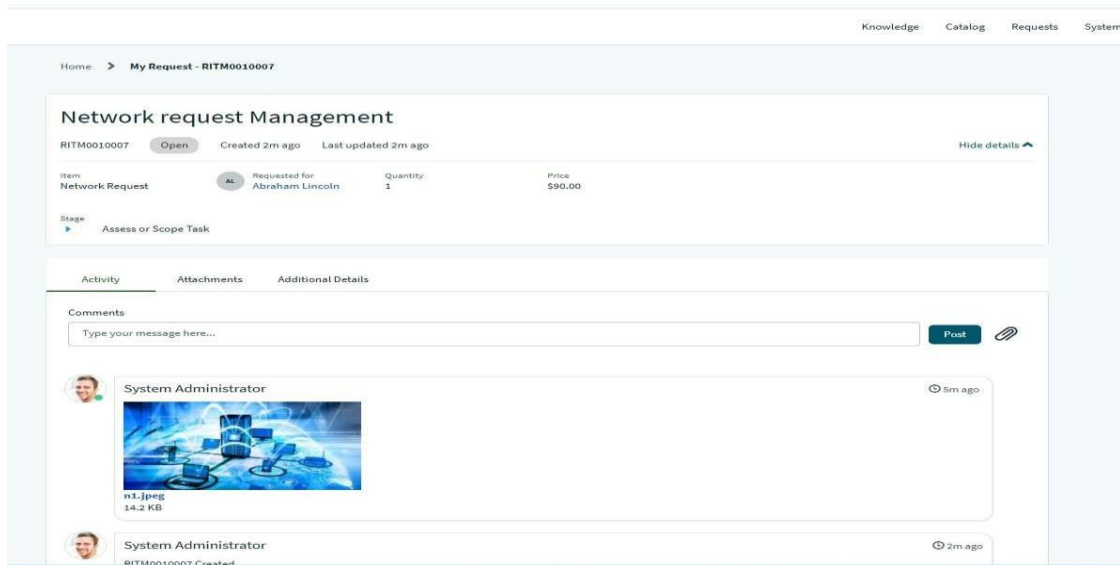

Data Flow Diagram & User Stories

Date	23 June 2026
Name	M Manosika
Project Name	Automated Network Request Management System
Maximum Marks	4 Marks

End-to-End System Architecture and Workflow Overview

The Automated Network Request Management System follows a structured workflow that begins when an employee submits a network service request through the ServiceNow portal. The request is validated, routed for managerial approval, and processed by the IT Network team. Once approved, the request details are stored in the designated database, ensuring complete traceability and efficient request management.

Data Flow Diagram (DFD) Specifications

The Data Flow Diagram illustrates how information flows between users, system processes, and data repositories within the Automated Network Request Management System. It provides a clear representation of the interactions involved in processing a network request.

Core Components of the DFD

1. External Entities

Requester (Employee)

- Initiates a network request through the ServiceNow Service Portal.
- Provides the required network and location information.

Line Manager (Approver)

- Reviews the submitted request.
- Approves or rejects the request based on business requirements.

2. System Processes

Process 1.0 – Request Validation

- Validates mandatory input fields.
- Retrieves employee profile information automatically.
- Ensures complete and accurate request submission.

Process 2.0 – Approval Workflow

- Routes the request to the reporting manager using Flow Designer.
- Processes approval or rejection decisions based on workflow conditions.

Process 3.0 – Request Fulfillment & Database Update

- Generates tasks for the Network Administration team.
- Stores approved request information in the designated tracking database.

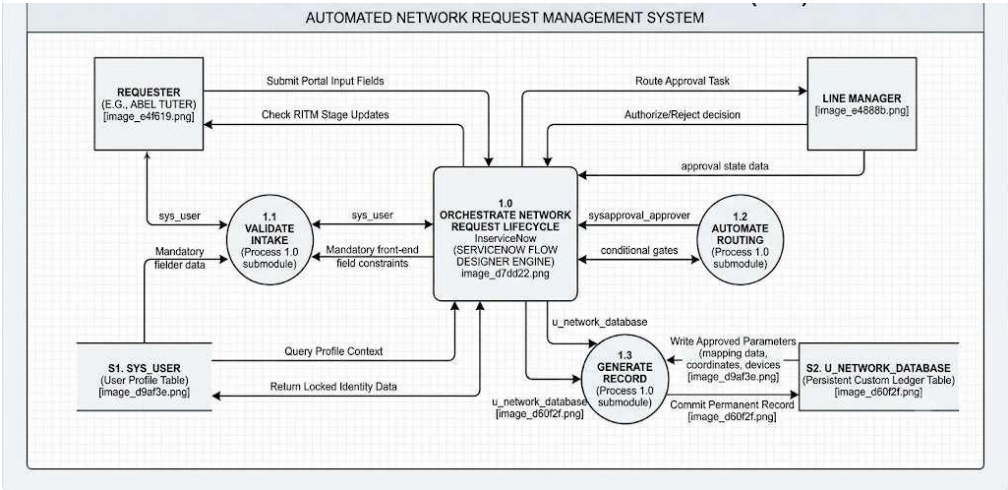

3. Data Stores

sys_user Table

- Stores employee profile information used during request submission.

u_network_database (Custom Table)

- Maintains approved network request records for tracking, reporting, and future reference.

User Stories Table

The following user stories describe the functional requirements of the system from different user perspectives, ensuring that the proposed solution satisfies both employee and administrator needs.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
 Customer/Requester Abel Tutor [cite: image_e7e69f.png]	REQUEST PORTAL INTAKE [cite: 1]					
	Automated Network Management (Epic 1)	USN-01	User Name to portal in and u_network_database	- Search deskw intranet. 1] - Does or contail in ne queue 1] - Search has stapped out below. 1]	Priority	Sprint-1
		USN-02	User Name to re-fill auto-fill	Auto-fill systemic hrentions in thentification is havour. 1]	High	Sprint-1
		USN-03	User Necomme. u_network_database	Check old matidata in Isienity connectie tatl instructions.	Low	Sprint-2
	Corporate Permission It [cite: 1]	USN-04	User Name / approval intranet	Request ananagement comperselHs suppor queue [1]	Low	Sprint-2
 Administrator/ Approver	APPROVAL AUTOMATION [cite: 1]					
	Approval Approval Administrator/ Automation [cite: 1]	USN-05	Connect-convair claimed recont records	- Consum-grade Portal Experience - Context-Aware UI Policies - Approval ('u_network_database')	Approval	Sprint-1
		USN-06	Context-aform approval database	- Confused clairied interfaces - Approval automation	Low	Sprint-2
		USN-07	Connectw-in network network management	- Data-ractive injection - Results in worksration request and insturted queue [1]	Low	Sprint-2
		USN-08	Is this a New connection or Relocation [cite: 1]	Instant record injection	Low	Sprint-1 Sprint-2
