

Project Design Phase

Problem – Solution Fit Template

Date	24 June 2026
Name	M Manosika
Project Name	Automated Network Request Management System
Maximum Marks	2 Marks

1. Problem–Solution Fit Overview

The Problem–Solution Fit Canvas illustrates how the proposed Automated Network Request Management System addresses the existing challenges in managing network service requests. It establishes a clear relationship between user pain points and the ServiceNow-based solution designed to improve request processing, approval management, and data accuracy.

1. CUSTOMER SEGMENT		3. UNFAVORABLE SITUATIONS		2. CUSTOMER BEHAVIOR	
Abel Tuter; non-technical employees, cross-department staff needing physical workspace utilities. (cite: image_e4f619.png, image_d9af3e.png, 1)		Manual transcription errors [cite: 1] Fragmented communications/emails [cite: image_f9405a.png] Isolation from real-time status checkpoints Isolation from real-time status checkpoints Unknown operational delays [cite: image_f9405a.png]		Transcribing complex codes manually [cite: image_f9405a.png] fragmented search for correct procedure/intranet wiki sending repeated chat pings [cite: 1] to various support personnel various support personnel [cite: image_f9405a.png]	
4. 'HARD TO DO' TASKS		5. PROBLEM ROOT CAUSE		6. BEHAVIORS	
Clerical data-entry of network variables [cite: 1] finding/navigating to decentralized specialized queues [cite: monitoring multiple email/ticket logs for updates [cite: image_f9405a.png]		Legacy portal lacks direct integration [cite: 1] to sys_user (User Profile API [cite: image_d9af3e.png]); no dynamic conditional logic or automated approval workflow orchestration.		Submitting duplicative/incomplete forms [cite: 1]; bypassing official procedure by opening generic 'IT Issues' incident tickets or using email aliases.	
7. TRIGGERS	8. YOUR SOLUTION	10. EMOTIONAL IMPACT		9. CHANNEL & MESSAGE	
Urgent department physical relocation mandate; office workspace modernization push; required hardware asset initialization deadline.	Unified Service Portal Catalog Item [cite: 1]; integrated UI Policies [cite: image_d9af3e.png]; conditional logic mapping [cite: image_d9af3e.png]; automated Flow Designer approvals [cite: 1]; direct u_network_database persistence [cite: image_d60f2f.png]	Restores confidence in infrastructure stability; eliminates clerical anxiety; ensures absolute network stability exactly when moving day arrives.		Accessible directly on Employee Service Portal homepage [cite: 1]; message: 'Request connections/relocations seamlessly in <60 seconds, with complete visibility.' [cite: 1]	

2. Problem–Solution Analysis

1. Customer Segment (CS)

Target Users:

Enterprise employees and corporate staff who require new network connections, network hardware installation, or relocation of existing network infrastructure during office movements or departmental changes.

2. Customer Behaviour (CB)

Current Behaviour:

Employees usually search internal portals or documentation for request procedures, manually prepare request details, and frequently contact the IT support team to obtain updates regarding their network requests.

3. Existing Challenges (EC)

Key Issues:

- Limited visibility into request progress after submission.
- Delays in network provisioning due to manual approval processes.
- Risk of service interruption when requests are not completed before workspace relocation.

4. Difficult Tasks (DT)

User Difficulties:

- Entering technical network information manually.
- Identifying the correct support team for network requests.

- Tracking approval status through multiple communication channels.

5. Root Cause (RC)

Underlying Problem:

The existing request process lacks automation, dynamic form validation, integration with employee profile information, and a structured approval workflow. These limitations result in manual processing, incomplete request data, and delayed service delivery.

6. Current User Practices (CP)

Observed Behaviour:

To receive faster responses, employees often submit duplicate requests or repeatedly contact the IT support team to check the status of their submissions.

7. Trigger Events (TE)

Request Initiators:

- Office relocation activities.
- Department transfers.
- New employee onboarding.
- Requests for additional network connectivity or hardware.

8. Proposed Solution (PS)

The proposed solution utilizes **ServiceNow Service Catalog**, **Client Scripts**, **UI Policies**, and **Flow Designer** to automate the complete request lifecycle. Employee information is automatically retrieved, request forms

dynamically display relevant fields, approval workflows are managed automatically, and approved requests are stored securely in the **u_network_database** table.

9. Delivery Channel & Value Proposition (DV)

Delivery Channel:

ServiceNow Employee Center / Service Portal.

Value Proposition:

Provide employees with a centralized, user-friendly platform to submit network requests, monitor approval status, and receive timely updates throughout the request lifecycle.

10. Business Impact (BI)

Expected Outcome:

The proposed solution minimizes manual effort, improves request accuracy, enhances transparency, reduces approval delays, and enables faster network provisioning, resulting in a better overall user experience.
